# GABERA | SOFTWARE SOLUTIONS

Custom software solutions for thriving businesses, organizations, and communities.
Built by engineering teams in Niger and Switzerland.

Our mission is to provide cutting-edge and awe-inspiring enterprise software innovation that our CUSTOMERS love and recommend, our EMPLOYEES are proud of, our PARTNERS trust, and the COMMUNITIES in which we work benefit from.

Shaping the digital transformation

We support people and their organizations in mastering and shaping the digital transformation. To do this, we develop technologies that improve the efficiency and security of companies and organisations, making them more agile, successful, and secure.

Founded in early 2021, we are a young start-up and full-service software and consulting company headquartered in Switzerland with a second office in Niger, West Africa.

Offices in Central Europa and West Africa

At our location in Eastern Switzerland-Liechtenstein, our team develops and implements software solutions on behalf of our clients.

At our location in Niamey, Niger, our motivated West African top talents develop high-quality software - under the guidance of our software architects and project managers in Europe.

We are driven by a passion for technologies that bring sustainable solutions to improve the livelihoods of current and future generations. Digital and connected products and services make life easier for people around the world. We want to open up new perspectives for people within our company's sphere of influence. This includes our customers, employees, suppliers, and the communities in which we work.

Products & Solutions

We develop tailor-made solutions for a wide range of customers from industry, commerce, public administration and the non-profit sector. We are currently developing a security software for financial intermediaries, a process automation solution for warehouses, a school administration product as well as a tax software.

DallaDalla Warehouse Management	Identity and Access Management	School Management Software	Electronic Invoice and Tax Software	Custom Enterprise Software
Automoatization in production-driven businesses	**Managing users in a heterogenous IT landscape**	**Efficient and transparent school admin solutions**	**Automate compliance to boost efficiency and transparency**	**IT solutions tailored to the specific needs of enterprises**
Gabera's software DallaDalla is a customized solution for processes in Logistics 4.0. DallaDalla plans, monitors and controls all processes from incoming goods to warehouse processes to outgoing goods. We develop the software together with our pilot customer WITRON Logistik & Informatik GmbH in Germany.	Gabera's IAM solution centralizes user access management across your enterprise and secures information access, while meeting data privacy requirements and maintaining audit-readiness. The software targets customers from the financial sector, the public sector, healthcare and telecom providers.	Easy-to-use, free of charge software to help primary and secondary schools in Niger save time, improve enrollement, and fulfill their misson. Managing daily proesses, attendances, state reporting and parent-teacher communication, our solution enhances educational best practice, transparency, efficiency, and student outcomes.	Our free, open-source certified electronic invoice and tax filing software enables enterprises in Niger to file their state tax returns fast and accurately. The software automates processes and improve audit perform-ance for sales tax compliance, from returns preparation to filing to audit defense.	We create software solutions to specific needs of customers from ideation to planning, development, testing, deploying, maintencance and new iteration. We develop solutions for SMEs) large enterprises, public administration, and non-profit organizations (NPOs).

Services & Support

We provide custom software solutions from concept and engineering to launch and support. We give our clients software experiences that are human-centered and future proof. Our technologists stay on top of the latest trends. Our products enable the efficient, secure and compliant execution of business processes.

Full Cycle Support

We provide full cycle support across all stages:

1. Analysis, Design & Planning
2. Professional Project Management
3. Development
4. Testing
5. Deployment, and Maintenance
6. Continuous Integration

Technical Consultancy

Our expert consultants deliver analysis and recommendations, to help you get to where you need to be. Our consultancy services cover broad technical capability areas including Communication, Computing and Processing, Vulnerability Analysis, Penetration Testing, Software Analysis, Software, Modelling and Rapid Prototyping.

Development

Coding is our passion. We turn your idea into a reality and make sure the code is of highest quality, enabling simpler future development. In addition to the precise definition of tasks and continuous review, quality assurance includes intensive manual and automated testing. Controlling is ensured by technical and administrative project management. We program according to the dual control principle with continuous code audits. We work according to established methods (Scrum), with state-of-the-art technologies and adhere to industry standards and guidelines (clean code).

Maintenance

Even the most advanced software can need updating over time. We seek to nurture an ongoing relationship by providing support and maintenance for your software, enabling your business to retain your competitive edge.

Gabera Traineeship Program

Our Traineeship Program offers educational and employment perspectives for IT talents in Niger and promotes diversity in the IT industry, while also addressing the technical skills shortage on the labour market. These are matters close to our hearts. To this end, we train motivated talents to become IT specialists at our inhouse training center Fitchatchen Software Academy in Niger.

Our Traineeship Program is an intensive 2-years study and stipend opportunity that will enable young West Africans to become skilled junior software developers to tackle complex coding problems in enterprises and organization.

The traineeship targets individuals who seek to accelerate their career as a developer and are eager to solve challenging IT problems. Instead of considering a candidate's professional background, Gabera seeks to hire those who are curious and have a passion for learning.

Our training program is free of charge. We seek extraordinary talents who commit to go through a challenging 2-years program to become great developers. Our company is ready to invest a lot of time and effort to provide trainees with cutting-edge industry expertise. Graduates may enter a working contract with Gabera in Niamey and assume an employment opportunity according to their skills and job availability.

Running a company with a higher purpose

At Gabera, our higher purpose is to contribute to a more sustainable world. Everything we do is with this goal in mind. It guides the way we do business. In doing so, we take a holistic view of people, technology, business and the environment. Our work should be good for people, the environment and the local economy.

We use the triple bottom line - people, planet, prosperity - to guide our business. Under each pillar, we commit to become an increasingly inclusive, sustainable, and responsible business.

People
We believe that innovation and technology should be accessible to everyone and aspire the technology industry to be accessible and inclusive. Therefore we engineer open-source products and offer market-relevant trainings and meaningful job opportunities.
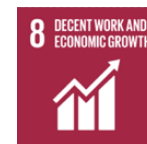

Planet
We want to make the planet a better place for future generations. We produce our own solar power at our office in Niger, aim at becoming climate neutral, and at supporting initiatives for climate change mitigation.

Prosperity
We want to be profitable in a responsible and ethical way. Our products include free, open-source software promoting universal access to software. We also will use a percentage of our revenue to make a meaningful difference in the world.

UN Sustainable Development Goals
It is crucial for us to match our corporate goals with those of the international community. We align ourselves with the UN Sustainable Development Goals (SDGs). Here are the goals we work towards through our products, daily work, and programs:

Economic Growth: We run a business with a higher purpose.

Quality of workplace: Our people are the heart of Gabera. We create a great workplace and meaningful opportunities.

ICT and innovation: We support domestic tech development and access to ICT in Niger, including engineering a tax compliance software.

Education: We promote education for trainees and employees through scholarships and education subsidies. We develop free open-source software for primary and secondary schools in Niger.

Environment: All industries have an environmental footprint — tech included. We offset our footprint, but it is not a long-term solution. We continue looking for ways to lower our impact and work toward becoming net positive.

Our ultimate goal is for social impact to become a part of every company's day-to-day activity. It's about integrating sustainability into all aspects of the business, from governance to employee wellbeing, and career development, to customer service. It is important to us to track, measure and keep our goals, progress, and shortcomings visible.

Your partner for success

With Gabera, you get way more than just software — you get a partner. We connect you with the people, resources, knowledge, and technology that help you achieve your goals.

Here are six reasons to partner with us:

1

Engineering quality software
We create customized software for you with know-how and passion. We provide you with state-of-the art technology that minimizes future operational costs and risks.

2

In-house software development
Our software is built by our own teams in Switzerland and Niger. This way, we create solid workflow, corporate ethics, and culture that significantly influences product creation and outcome.

3

Customer success is core
As a software developer in central Europe and West Africa, we are always close to you. You get all your questions quickly answered with our team. We speak English, French, German, and Arabic.

4

Adaptability and resource awareness
Our products are precisely adjusted to the individual requirements of your company. We respond flexibly to your needs and implement solutions efficiently and quickly delivered within a cost-effective business model.

5

Holistic approach to problem-solving
With our methodological expertise and experience, we develop holistic solutions. In order to do so, our working culture based on diversity, learning and knowledge sharing is key.

6

Operating with a higher purpose
Our work should be good for people, the environment, and the economy. We aim at creating a great workplace, make an impact in the community, offset our environmental footprint, while keep ourselves accountable.
